DETAILED ACTION

1. The indicated allowability of claims 2-4, and 6-26 is withdrawn in view of the copending Application and the reference(s) to Imasu et al. (US 6,492,737 B1), Applicant's submitted prior art. Rejections based on these reference(s) follow.

Claim Rejections - 35 USC § 112

2. Claims 1-26, where claim 1 recites the limitation "the interposer substrate" (see line 10), and claim 14 recites the limitation "the plurality of semiconductor dice" (see line 3). There are insufficient antecedent basis for these limitations in the claims.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-26 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-38 of copending Application No. 10/150,902 in view of Imasu et al. (US 6,492,737 B1). The

Art Unit: 2815

limitations as claimed in claims 1-26 substantially met the limitations as set forth in claims 1-38, except that claims 1-26 do not include a flip chip and a dielectric filler material extends from the at least one opening into gaps. Imasu shows, for example in Fig. 4, a flip chip 12 and a dielectric filler material that extends through a dielectric member (4 and 9 combination) which serves as an interposer substrate.

Hence, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include flip chip and a dielectric filler material for the semiconductor chip environment, as is notoriously known.

This is a provisional obviousness-type double patenting rejection.
